

BEYMA | 5CX200ND

www.beyma.com

Beyma has introduced the new 5CX200Nd, a compact 5-inch coaxial speaker, which is able to work in a real full range application thanks to the low frequency extension of the woofer, an accurate and clear mid frequency response which takes benefit from the demodulating ring and optimised high frequencies with controlled dispersion provided by the 1.75-inch compression driver with a custom made aluminium horn. The common neodymium circuit design results in a compact and powerful unit: 300/80W program capacity (LF/HF) with 1.85kg weight and less than 100mm depth.
