SUNSHINE SAVINGS

SPAIN: Nearly 700-sq-m of the roof surface of Beyma's factory and HQ has been fitted with a 600,000 solar panel installation, generating 90 kilowatt-hours of electricity and contributing to the company's efficiency and environmental friendliness.

The Spanish manufacturer is able to exploit the almost constant sunshine of its location close to Valencia to make energy savings and reduce the environmental impact of its operation. The energy that the solar panels produce annually save 36,500kg of CO2 emissions, 43.7kg of sulphur dioxide, 35.64kg of nitrogen oxide and 205cc of radioactive waste. 'Beyma remains at the forefront in terms of caring for the environment innovation and development of ecological awareness,' commented company president Jose Masip Aymerich.
